

We are submitting a proposal on July 21 to the Federal Bureau of Land Reclamation WaterSMART Drought Response Program for funding to drill a new well and to rehabilitate one of our existing wells. The proposed project will help to increase pumping capacity, potentially reduce fluoride content, and reduce the need for water hauling. The proposal requires letters of support from our community. We have already written the letter for you and need you to send an email to: tpwuc1@gmail.com with the subject Letter of Support containing the letter as shown below with your name and address by July 20.

If you have any questions, email: tpwuc1@gmail.com

An example letter for you to put your name and address on is linked below in Text, PDF and Microsoft Word formats:

Denver, CO 80225

Dear Sir/Madam:

I enthusiastically support funding of the project titled “Well Drilling and Rehabilitation in Response to Drought in Tranquillo Pines” submitted by the Tranquillo Pines Mutual Domestic Water Consumers Association (TPMDWCA) to the WaterSMART Drought Response Program, Funding Opportunity Number R26AS00016.

Due to the severe drought conditions in our area, TPMDWCA must meet the needs of families in our community with increased well production. By having a new well and rehabilitating a second well, the community will have more reliable water sources. This project will have these additional benefits: (1) the wells may produce water with a lower fluoride content which will aid with regulation compliance and give us peace of mind that our drinking water is safe and (2) we will not have to rely on water-hauling to meet our supply needs which has caused additional water bill assessments impacting our pocketbooks.

It is very important to our community that this project is funded.

Sincerely,

YOUR NAME
